

Training weather / conditions

Philomath Wildfire - Training | EX-PHIL-001 (fictional)

Operational period: October 15, 2026 | 0800-2000

These assumed conditions are exercise inputs for October 15, 0800-2000. They are not a weather forecast, observation, air-quality reading or fire behavior prediction.

Assumed conditions

Time	Temperature	Wind (from NW)	Relative humidity
0800	58 F	5 mph; gusts 10	75%
1400	76 F	10 mph; gusts 18	40%
2000	62 F	6 mph; gusts 12	60%

Exercise condition: smoke may affect shelter access, indoor conditions and travel during the period. No numerical air-quality value is assumed. Access release and route status must be reconfirmed as conditions change.

Briefing discussion: Operations and Safety review how the assumed conditions affect shelter intake, staff relief, exterior assessment and supply delivery. Carry any changed precautions into the 204s and 208 before work.

For an actual IAP, Situation Unit obtains a current forecast and relevant conditions from authoritative sources, identifies the issue time and coverage area, and coordinates interpretation with appropriate specialists.

Tides / currents: not applicable to this inland exercise. This page supplies weather and condition assumptions only.

Prepared by: Example Situation Lead | October 14, 2026, 1930. These assumptions supplement the ICS 202 emphasis and the ICS 208 safety message.
